

FLOORBRIDGE® JOINT PROFILES

– The permanent solution for floor joints

- 1 Structural concrete
- 2 Composite adhesive
- 3 Sealing tape
- 4 Replaceable expansion insert
- 5 CPS 20/50 joint profile
- 6 Coating

✓ **Prefabricated profiles** for rapid installation. Depending on the version, they can be fully loaded and accessed again by anything from pedestrians to heavy goods vehicles within **a few hours**.

✓ Absolutely **free of metal** and therefore **100% rust-free**: As de-icing salt and water are carried directly into underground car parks, parking levels and multi-storey car parks from outside, the **absence of metal** is a key criterion for smooth operation.

✓ **Long service life** and **low maintenance costs**.

✓ **Waterproof**: The best protection thanks to a tested and sealed coating connection and easy-to-replace rubber insert.

✓ **Custom colour scheme**: The profiles can be coated as desired, meaning they will fit perfectly into your colour concept.

FLOOR JOINT PROFILES FOR MULTI-STOREY CAR PARKS

The materials of multi-storey and underground car parks are subjected to enormous static and weather-related challenges due to thousands of tons of load, moisture and de-icing salt. Joint transition solutions serve a crucial function. **Carbon composite floor joint profiles** with a permanently sealed coating connection protect the materials in the long term.

Our **floor joint profiles** are put through their paces. The tests go far beyond the standard, be it compliance with the **EU Vibration Directive**, **AgBB conformity** or a **building authority test certificate**. Our repertoire of test certificates is extensive, and we are constantly striving to expand it.
