

FLOORBRIDGE® JOINT PROFILES

– The permanent solution for floor joints

- 1 Structural concrete
- 2 Composite adhesive
- 3 WGX 20/50 joint profile
- 4 Coating / Sealing

- ✓ **Prefabricated profiles** for rapid installation. Depending on the version, they can be fully loaded and accessed again by anything from pedestrians to heavy goods vehicles within **a few hours**.
- ✓ Absolutely **free of metal** and therefore **100% rust-free**.
- ✓ **Long service life** and **low maintenance costs**.
- ✓ **Drive over with low vibration** – this substantially reduces maintenance costs for forklifts.
- ✓ **Can be ground down multiple times:** The profiles can be ground down multiple times, meaning they can be adapted to any existing floor.
- ✓ **Waterproof:** FloorBridge joint profiles in a waterproof design are possible thanks to the tested sealed coating connection.
- ✓ **Custom colour scheme:** The profiles can be coated as desired, meaning they will fit perfectly into your colour concept.

FLOOR JOINT PROFILES FOR INDUSTRY AND TRADE

Uneven and unsealed floor joints in warehouses, production halls or hospitals cause **noise or impact loads** on the wheel bearings of forklifts. In the long run, this results in high repair costs. Today, floor joints for industrial floors must ensure **drive over with low vibration, be highly resilient, hygienically sealed** and **allow for a design of your choosing**. FloorBridge® solves the issue of floor joint maintenance at the source and offers a permanent solution.

Our **floor joint profiles** are put through their paces. The tests go far beyond the standard, be it compliance with the **EU Vibration Directive, CE marking, or AgBB conformity**. Our repertoire of test certificates is extensive, and we are constantly striving to expand it.

MAXIMUM COMPATIBILITY WITH CONCRETE AND COATING.

Can be ground down and coated multiple times
